Health Officer

## PRESS RELEASE FOR LOCAL MEDIA

**To: Local Media Outlets**

**From: Shelby Pasch, Health Promotion Supervisor**

**RE: National Condom Week**

**Release Date: (Immediately) January 28, 2021**

### National Condom Week

*National Condom Week is February 14<sup>th</sup> through February 21<sup>st</sup>. Consistent and correct condom use promotes safer sex and overall sexual health. Play it safe to prevent sexually transmitted diseases.*

**Central Michigan District Health Department (CMDHD) offers STD screening and pregnancy tests as well as education and will be offering FREE condoms throughout National Condom Week** being recognized from February 14<sup>th</sup> through February 21<sup>st</sup>.

With Valentine's Day just around the corner, it is important to acknowledge another upcoming holiday, National Condom Day that is also celebrated Sunday, February 14<sup>th</sup>. Although light-hearted, this holiday sends a very important message about the significance of safer sex. Remember, that no matter how strong, love still needs distance. So, while you're out buying chocolates or flowers, make sure you stop by the condom aisle or your local health department.

The history of condoms dates back as far as 3000 BC. Throughout the years, they have been fashioned from a variety of materials, including sheep or lamb intestines, oiled silk paper, and fine leather. The invention of latex in the 1920's led to the condoms we are now familiar with. Since then, condoms have evolved to include a wide range of sizes, textures, flavors, and colors to suit all needs and desires. Female condoms, as well as polyurethane condoms (for those with latex sensitivities), are also options.

Although the material of the condom has changed with time and technology, their purpose of preventing sexually transmitted diseases (STDs), HIV, and unplanned pregnancies has remained the same. When used consistently and correctly the use of condoms greatly reduces (but does not eliminate) the transmission of STDs

*Please visit us at our website [www.cmdhd.org](http://www.cmdhd.org)*

and HIV. The only way to completely prevent STDs, HIV, and unplanned pregnancy is abstinence. If that option is not for you, practicing safer sex through condom use is the best way to protect yourself and your partners.

According to the State of Michigan, the number of reported STD's is rising. Michigan reported 50,374 cases of Chlamydia, 18,264 cases of Gonorrhea, and 685 cases of Syphilis in 2019. In accordance with the Center for Disease Control and Prevention, approximately 37,968 new cases of HIV were diagnosed in adolescents and adults in the United States in 2018. With consistent and correct condom usage or abstinence, these diseases are mostly preventable. Even with condom use everyone who is sexually active should be screened regularly for STDs and HIV.

For more information on condoms and their proper use, and/or STDs, please contact one of our Central Michigan District Health Department (CMDHD) locations and we will be happy to assist with any questions, concerns, or testing that you may need. Always remember that all sex should be safer sex.
